24 Club

The 24 Club is a before-school mathematics club that meets weekly for interested 3rd-5th grade students. The club is based around the 24 game, in which student players attempt to make "24" using all four numbers on a game card. Students enhance their arithmetic skills while playing different variations of this game, including double digits, variables, and integers. Club members work towards an annual county competition, in which student representatives compete against students from other AACPS schools.
