

## After Hours Course Offerings

STEM After Hours classes are 0.5 credit classes that STEM students can elect to take after the regular school day ends. They are designed for STEM students who have full schedules or want to provide room in their day schedules to free up opportunity for other coursework. Typically, classes run two days a week from 2:15-3:45 pm each semester. They are *free* to STEM students and provide a wonderful opportunity for students to earn additional credit. Please check with the school-based STEM site coordinator for details of sign up dates and locations.

\*Note classes may be offered annually or on a rotational basis and are included in Marking Period Report cards as Day School credit.

### North County High School STEM After Hours Course Offerings
